

## CLAIM AMENDMENTS

---

1. (Previously Amended) A method comprising:  
receiving an electronic indication of an inventory allocation;  
completing a plurality of on-line sales transactions against said allocation; and  
in response to the depletion of said allocation, automatically requesting additional  
inventory allocation.
2. (Original) The method of claim 1 further including maintaining a count of  
available inventory allocation and decrementing said count as each on-line transaction is  
completed.
3. (Previously Amended) The method of claim 1 wherein receiving an electronic  
indication of an inventory allocation includes receiving said inventory allocation from a remote  
site.
4. (Previously Amended) The method of claim 1 wherein receiving an electronic  
indication of an inventory allocation includes receiving said allocation over a network.
5. (Previously Amended) The method of claim 4 wherein receiving an electronic  
indication of an inventory allocation includes receiving said allocation over the Internet.
6. (Previously Amended) The method of claim 1 wherein requesting an electronic  
indication of inventory allocation includes determining whether the inventory allocation needs to  
be replenished.
7. (Previously Amended) The method of claim 6 wherein determining whether the  
inventory allocation needs to be replenished includes determining whether an inventory  
allocation has been reduced through the completion of on-line transactions below a preset level.

8. (Previously Amended) The method of claim 6 wherein determining whether the inventory allocation needs to be replenished includes determining the rate at which on-line transactions are being completed and implementing a dynamic calculation that considers the rate at which on-line transactions are being completed.

9. (Original) The method of claim 8 including utilizing the rate at which transactions are completed and the rate at which additional inventory is to be requested to determine whether the inventory allocation needs to be replenished.

10. (Previously Amended) An article comprising a medium for storing instructions that enable a computer to:

receive an electronic indication of an inventory allocation;  
complete a plurality of on-line sales transactions against said allocation; and  
in response to the depletion of said allocation, automatically request additional

dedicated inventory allocation.

11. (Previously Amended) The article of claim 10 further storing instructions that enable a computer to maintain a count of available inventory allocation and decrement said count as each on-line transaction occurs.

12. (Previously Amended) The article of claim 10 further storing instructions that enable a computer to receive an inventory allocation from a remote site.

13. (Previously Amended) The article of claim 10 further storing instructions that enable a computer to receive said allocation over a network.

14. (Previously Amended) The article of claim 13 further storing instructions that enable a computer to receive said allocation over the Internet.

15. (Previously Amended) The article of claim 10 further storing instructions that enable a computer to determine whether to request an additional inventory allocation based on the number of on-line sales transactions completed against said allocation.

16. (Previously Amended) The article of claim 15 further storing instructions that enable a computer to determine whether the inventory allocation has been reduced below a preset level.

17. (Previously Amended) The article of claim 15 further storing instructions that enable a computer to implement a dynamic calculation that considers the rate at which on-line transactions are being completed.

18. (Previously Amended) The article of claim 17 further storing instructions that enable a computer to utilize the rate at which transactions are completed and the rate at which additional inventory is to be requested to determine whether the inventory allocation needs to be replenished.

19. (Currently Amended) A system comprising:  
a server that completes a plurality of on-line sales transactions against an  
electronic indication of an inventory allocation;  
a memory coupled to said server that stores said electronic indication of said an  
inventory allocation; and  
said server decrements said electronic indication of said inventory allocation with  
each on-line sales transaction, monitors the electronic indication of inventory allocation and  
automatically requests an additional electronic indication of inventory allocation.

20. (Original) The system of claim 19 wherein said server is coupled to the Internet and completes transactions over the Internet.

21. (Original) The system of claim 19 wherein said server dynamically determines when to request additional inventory allocation based at least in part on the rate at which transactions are being completed.

22. (Original) The system of claim 21 wherein said server requests additional inventory allocation based at least in part on a predetermined frequency for requests for additional inventory allocation.

23. (Currently Amended) A method comprising:  
providing an electronic allocation of an inventory allocation to an on-line sales transaction service;  
receiving a request from said an on-line sales transaction service for an additional inventory allocation; and  
providing said on-line sales transaction service with an additional inventory allocation.

24. (Original) A method of claim 23 further including providing a frequency for requests for additional allocation.

25. (Previously Amended) A method of claim 23 including providing the indication of an inventory allocation over the Internet.

26. (Currently Amended) An article comprising a medium that stores instructions that enable a computer to:  
provide an electronic indication of an inventory allocation to an on-line sales transaction service;  
receive a request from said an on-line sales transaction service for an additional inventory allocation; and  
provide said on-line sales transaction service with additional inventory allocation in response to said request.

27. (Previously Amended) The article of claim 26 further storing instructions that enable a computer to provide a frequency for requests for additional allocation.

28. (Previously Amended) The article of claim 26 further storing instructions that enable a computer to provide said inventory allocation over the Internet.

29. (Currently Amended) A system comprising:  
a server; and  
a storage storing software that causes said server to provide an electronic indication of an inventory allocation to an on-line transaction service, receive a request from said ~~an~~ on-line sales transaction service for an additional inventory allocation, and provide an additional inventory allocation to said on-line sales transaction service.

30. (Original) The system of claim 29 wherein said server is coupled to the Internet.
